

Omnichannel HCP Engagement Scoring

(Problem Statement Title)

Problem Statement Description:

Healthcare companies interact with Healthcare Professionals (HCPs) through multiple channels such as email, websites, pharmaceutical/medical representatives and virtual events. However, engagement data from these channels may exist separately, making it difficult for the marketing team to obtain a single, unified view of how engaged an individual HCP actually is.

For example, an HCP may frequently open emails, visit the company's website, attend webinars and interact with a representative. Looking at these activities independently does not provide a clear picture of the HCP's overall engagement.

Why This Problem?

The problem is important because marketing teams need to decide where and how to engage each HCP effectively.

Without a unified engagement view:

- HCP interactions remain fragmented across different channels.
- Marketing teams may not know which channels are actually generating meaningful engagement.
- The same communication strategy may be applied to HCPs with very different engagement behaviors.
- Marketing resources and channel spending may not be optimally allocated.
- It becomes difficult to prioritize highly engaged or disengaged HCPs.
- Personalization of future HCP communication becomes more difficult.

Target Audience: Marketing / Digital Marketing Teams

They:

- Understand the overall engagement level of each HCP.
- Identify highly engaged and low-engagement HCPs.
- Determine which channels are most effective for different HCPs.
- Decide where marketing effort and spending should be concentrated.
- Develop more personalized engagement strategies.

Expected Solution:

Develop an Omnichannel HCP Engagement Scoring system that combines HCP interactions from email, web, representative visits and virtual events into a single weighted Engagement Score.

The solution should:

- Provide a unified engagement scorecard for each HCP.
- Identify the most effective engagement channels for each HCP.
- Segment HCPs based on their engagement level.
- Provide a channel-mix recommendation to guide future marketing interactions.
- Present the insights through a simple dashboard for marketing teams.
